Report on the Financial Advisor Chatbot

Part 1: Local LLM Setup and Interaction

- 1.1 Download Ollama from https://github.com/ollama/ollama
 - Download the .exe file suitable for your O.S

- Install Cancel
- Run "ollama run llama3.2" to verify the installation.

C:\Users\karth\OneDrive\Desktop> ollama run llama3.2
>>> Send a message (/? for help)

1.2 Chosen GPT-2 as the second LLM

- Use GPT-2 by installing hugging face's transformers library
- Run the command "pip install transformers torch" to install transformers and torch library.

```
pip 24.2 from C:\Users\karth\AppData\Local\Programs\Python\Python312\Lib\site-packages\pip (python 3.12)
S C:\Users\karth\OneDrive\Desktop\CSYE7380> pip install transformers torch
Collecting transformers
Downloading transformers-4.45.1-py3-none-any.whl.metadata (44 kB)
Collecting torch
Downloading torch-2.4.1-cp312-cp312-win_amd64.whl.metadata (27 kB)
Collecting filelock (from transformers)
Downloading filelock-3.16.1-py3-none-any.whl.metadata (2.9 kB)
Collecting huggingface-hub-1.0,>=0.23.2 (from transformers)

       click>=7.0->uvicorn) (0.4.6)
```

- Create a python file to load your LLMs using FastAPI.
- Run the file to host your LLM's in the local system.
- Once hosted open a new cmd prompt(Not powershell script as it has issues running curl commands) and run your curl commands.

1.4 Comparative Analysis

- Simple Query: who is the president of india
 - curl Command: curl -X POST http://localhost:11434/api/generate -H "Content-Type: application/json" -d "{\"model\": \"llama3\", \"prompt\": \"Who is the president of india\"}"
 - response:

{\"output": "Generated text: Who is the president of india in 1950? Who is the president in 1990? What are their primary differences? And so on. There is a c
tear distinction between presidents who have a general policy or a special interest agenda. In particular, many presidents are quite clearly concerned that
their nation's foreign policy objectives are in jeopardy. If that happens, I think it is up to these special interests who are acting as guardians of that i
nterests and in that sense, that is their job. That is, this", "error": "C:\Users\\karth\\AppBata\\Local\\Programs\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Python\Pytho

Observations:

1. Response Consistency:

- Simple Queries: Both models (LLaMA and GPT-2) seem to handle straightforward queries effectively. The responses for "Who is the president of India?" should be consistent, especially for common knowledge questions.
- Complex Queries: The models also handle complex queries involving multiple parts (like asking about historical presidents) but the quality and completeness of responses Varies. LLaMa can answer the questions correctly while GPT-2 is faster but gave irrelevant responses.

2. Parameter Impact:

- Temperature: Adjusting the temperature parameter (set to 0.7 in some cases) influenced
 the creativity and variability of responses. A higher temperature usually leads to more
 diverse responses, while a lower value results in more deterministic outputs. The outputs
 with and without this parameter show differences in creativity or specificity with lower
 values being more accurate.
- Max Tokens: Limiting the number of tokens (set to 50 in your examples) constrains the response length. This is crucial for managing the verbosity of the model's replies.

3. Model Differences:

- LLaMA vs. GPT-2: Both models likely have different underlying architectures and training datasets, which could lead to variations in their answers. For example, LLaMA generates more nuanced responses, especially if it's compared to GPT-2.
- Historical Knowledge: When asked about historical figures or events (like past presidents), it's essential to consider the training data. The models' knowledge may be limited to their training cut-off dates, which affects accuracy for historical gueries.

5. Comparative Results:

 If you compare the responses from LLaMA and GPT-2, look for consistency in facts (e.g., the names of the presidents, their terms, and notable differences) and differences in articulation. This will help in evaluating the strengths of each model for different types of queries.

6. Need for Further Testing:

- To better understand the models' capabilities, consider testing with more diverse prompts, including ambiguous questions, multi-part queries, and prompts requiring specific formats (like lists or summaries).
- It would also be beneficial to test the models under different system loads or with varying network conditions to assess their performance and response times.

Part 2: Domain-Specific Chatbot Development :

2.1 Domain: Finance and Personal Financial Planning:

1. Target User Base:

- Individual Investors: People looking to invest in stocks, bonds, mutual funds, or other investment vehicles.
- Young Professionals: Individuals starting their financial journey who need advice on budgeting, saving, and managing student loans or debt.
- Small Business Owners: Entrepreneurs who need help with cash flow management, financial forecasting, and accessing capital.
- Retirees: People planning for retirement or managing retirement funds, requiring advice on pension plans, social security, and investment strategies.
- General Public: Anyone seeking advice on personal financial management, like creating savings plans, understanding taxes, or getting insurance advice.

2. Specific Use Cases:

- Investment Advice: The chatbot can provide personalized recommendations for investment strategies based on the user's risk tolerance, financial goals, and time horizon
- Budgeting and Savings: Users can ask the chatbot to help create a personalized monthly budget, track spending, and suggest ways to save money.
- Loan and Debt Management: The chatbot can offer advice on consolidating loans, managing debt, and planning for debt repayment, including mortgage advice.
- Retirement Planning: The chatbot can assist users in creating a retirement plan, calculating the amount they need to save, and offering investment options for retirement accounts like 401(k)s or IRAs.
- Tax Guidance: It can offer basic tax advice, such as tax-saving investment options, filing statuses, and understanding deductions.
- Small Business Finance: For small business owners, the chatbot can assist with cash flow forecasting, expense tracking, and help in finding funding options like loans or investors.
- Insurance Planning: Providing advice on different types of insurance, such as health, life, auto, and home, and helping users choose appropriate coverage.

Chatbot Implementation:

- Using StreamLit to create an interactive user Interface.
- Run command "pip install streamlit" to install StreamLit.

 Create a python file "file_name.py" and write the code to handle UI and backend logic.

```
import streamlit as st
import subprocess
import subprocess
import re

# Function for query preprocessing
def preprocess_prompt(prompt: str) -> str:

# Example preprocessing: lower(asing and stripping unnecessary characters
prompt = prompt.lower().strip()
prompt = re.sub(r'[^\|\w\s]', '', prompt) # Remove punctuation

# Add a financial context to the prompt
framincal_context = "vou are a financial advisor. Please provide advice related to the following query: "

```

- Defining the preprocess_prompt and postprocess_response to process the input query and output response respectively.
- Preprocessing the input prompt and giving it a finance context to improve the relevance and precision of LLaMA's responses in the finance domain

- Creating two tabs one for query and response the other tab for conversation history(Using the streamlit's session state)
- Running the Llama model by importing and using subprocess, processing the output and displaying it.

Testing and Evaluation:

Simple Questions:

 For the question "What is the capital of France?", while answering the question it also connects the dots between France and finance and makes some suggestions.

Enter your finance-related question:

"What is the capital of France?"

Chatbot: As a financial advisor, I'd be happy to provide information on the capital of France.

However, I must point out that the question seems unrelated to finance. Nevertheless, I'll provide an answer and also offer some relevant financial insights in passing.

The capital of France is Paris. But let's not get too sidetracked from the main topic – finance!

Now, if we were to connect the dots between the capital of France and finance, here are a few points:

- 1. **Tourism**: Paris is one of the most popular tourist destinations in the world, attracting millions of visitors every year. The tourism industry contributes significantly to France's GDP, providing a boost to local businesses and creating employment opportunities.
- 2. **Real estate**: The city of Paris is known for its iconic landmarks, luxurious apartments, and high-end real estate market. Investing in real estate in Paris can be a lucrative opportunity, but it's essential to do your research and consider factors like location, property condition, and market trends.
- Stock market: France has a well-established stock market, the Euronext Paris, which is home to many
 multinational companies. If you're interested in investing in the French market, it's crucial to stay
 informed about economic news, company performance, and market sentiment.
- 4. Financial planning: As a financial advisor, I always recommend that clients create a comprehensive financial plan, including investment strategies, tax planning, and retirement savings. Considering your interests in France, you might want to explore investing in French assets or exploring financial opportunities related to the country.
- For the question "Who wrote 'To Kill a Mockingbird'?"

Chat Conversation History

Enter your finance-related question:

"Who wrote 'To Kill a Mockingbird'?"

Chatbot: I'm happy to help with your question, but I must clarify that my primary expertise lies in providing guidance on personal finance and investment-related matters. However, I can try to address your question about "To Kill a Mockingbird" from a neutral perspective.

"To Kill a Mockingbird" is a classic novel written by Harper Lee, published in 1960. The book has since become a timeless classic of modern American literature, exploring themes of racial injustice, prejudice, and the loss of innocence through the eyes of a young girl named Scout Finch.

If you're looking for advice related to financial planning or investment strategies, I'd be happy to help with that! Alternatively, if you'd like to discuss how the themes and lessons from "To Kill a Mockingbird" can be applied to real-life financial decisions, such as budgeting, saving, or investing, I'm here to offer insights.

Please let me know which direction you'd prefer to explore.

Complex, multi-turn conversations:

• For the question "I'm planning a trip to Japan." ,It provides information on how to plan your finances while suggesting when and where to explore.

Enter your finance-related question:

"I'm planning a trip to Japan."

Chatbot: Japan is an amazing destination, but it can be quite expensive. Here are some tips for managing your finances while planning your trip:

- 1. **Set a budget**: Determine how much you can afford to spend on your trip and stick to it. Consider all the expenses, including flights, accommodation, food, transportation, and activities.
- 2. **Book in advance**: Book your flights and accommodation well in advance to get the best deals. This is especially true for peak travel seasons like cherry blossom season or New Year's.
- 3. **Research affordable options**: Look into affordable accommodation options like hostels, guesthouses, or Airbnb apartments. You can also consider staying outside of major cities if you're on a tight budget.
- 4. Eat wisely: Japan is famous for its delicious food, but it can be expensive. Try eating at local restaurants, street food stalls, or markets where you can find affordable options. Consider cooking your own meals if your accommodation allows it.
- 5. **Use public transportation**: Japan has an excellent public transportation system that's efficient and affordable. Use the subway or buses to get around instead of taxis or rental cars.
- 6. **Consider a Japan Rail Pass**: If you plan on traveling extensively by train, consider purchasing a Japan Rail Pass. This can save you money on train tickets compared to buying individual passes.
- 7. Avoid touristy areas at peak hours: Popular tourist spots like Shibuya Crossing or Asakusa Temple can be very crowded during peak hours. Try visiting these places early in the morning or later in the evening when the crowds are smaller.

• When asked "What's the best time to visit for cherry blossom viewing?"

•

Best Time to Visit for Cherry Blossom Viewing:

The best time to visit Japan for cherry blossom viewing (called "Hanami" in Japanese) is usually from late March to early April, when the blossoms are in full bloom. However, the exact timing varies depending on the location and weather conditions.

Here's a rough guide to help you plan your trip:

- Tokyo: Late March to early April
- Kyoto: Early to mid-April
- Osaka: Mid-to-late April
- Hokkaido: Late April to early May

Financial Planning Advice for Your Trip:

- 1. **Book Accommodations Early:** Cherry blossom season is a popular time to travel, so book your accommodations well in advance to avoid high prices and availability issues.
- 2. **Consider Budget-Friendly Options:** Look into budget-friendly accommodations, such as guesthouses or hostels, which can be more affordable than luxury hotels.
- 3. **Plan Ahead for Transportation:** Research transportation options in advance, such as purchasing a Japan Rail Pass or booking flights and trains early to avoid high prices.
- 4. **Budget for Food and Activities:** Cherry blossom viewing often involves food and drinks, so plan ahead for these expenses and consider budgeting extra for activities like temple visits or festivals.
- 5. **Take Advantage of Travel Insurance:** Consider purchasing travel insurance to protect yourself against unexpected trip cancellations or interruptions.
- For the guestion "Can you suggest some popular viewing spots in Tokyo?"

Chatbot: As a financial advisor, I'd be happy to help you with that!

However, I must clarify that my primary expertise lies in personal finance and investing. But, who doesn't love Tokyo, right? Here are some popular viewing spots in Tokyo, perfect for when you take a break from work or planning a vacation:

- Shibuya Crossing: One of the busiest intersections in the world, Shibuya Crossing is a must-visit spot for any Tokyo traveler. Its vibrant atmosphere and eclectic fashion make it an ideal place to peoplewatch.
- 2. **Tokyo Tower**: This iconic communications tower offers stunning views of the city from its observation decks. It's especially beautiful during sunset or twilight hours.
- 3. **Imperial Palace East Garden**: A serene oasis in the heart of the city, the Imperial Palace East Garden is a tranquil spot for relaxation and contemplation.
- 4. **Sumo Tournament at Ryogoku Kokugikan**: If you're visiting Tokyo during sumo season (January to May), don't miss the opportunity to witness a live sumo tournament at this historic arena.
- 5. **Tokyo Skytree**: At 634 meters tall, Tokyo Skytree is the tallest tower in the world, offering breathtaking panoramic views of the city from its observation decks.
- 6. **Meiji Shrine Forest**: This beautiful forest is dedicated to the deified spirits of Emperor Meiji and his wife, Empress Shoken. It's a peaceful escape from the hustle and bustle of Tokyo.
- 7. **Shinjuku Gyoen National Garden**: A stunning park that combines Japanese, French, and English gardens, Shinjuku Gyoen offers beautiful scenery and walking paths for relaxation.

Now, if you'll excuse me, I need to get back to my financial planning work!

Domain-specific queries

 When asked "What are the most profitable stocks in US market in the year 2020? Chatbot: As a financial advisor, I'll provide you with some of the most profitable stocks in the US market for 2020, based on historical data and research. Keep in mind that past performance is not a guarantee of future success, and it's essential to do your own research and consider your individual financial goals and risk tolerance before investing.

Here are some of the top-performing stocks in the US market for 2020:

- NVIDIA Corporation (NVDA): The leader in graphics processing units (GPUs) and artificial intelligence
 (AI) computing, NVIDIA surged 145% in 2020, driven by strong demand from the gaming and AI
 industries.
- Amazon.com Inc. (AMZN): The e-commerce giant saw its stock price rise 74% in 2020, fueled by the
 growth of cloud computing, advertising, and the COVID-19 pandemic's accelerated shift to online
 shopping.
- 3. ** Shopify Inc. (SHOP)**: This Canadian e-commerce platform saw its stock price increase 138% in 2020, benefiting from the surge in online shopping during the pandemic.
- 4. **Microsoft Corporation (MSFT)**: The software giant rose 43% in 2020, driven by strong growth in its cloud computing business, including Azure and Microsoft 365.
- Alphabet Inc. (GOOGL): Google's parent company saw its stock price rise 35% in 2020, benefiting
 from the growth of online advertising and the increasing importance of digital services during the
 pandemic.
- 6. **Tesla Inc.** (**TSLA**): Although Tesla had a turbulent year, its stock still rose 76% in 2020, driven by strong demand for electric vehicles and solar panels.
- 7. **Cloud Computing Stocks**: Companies like Salesforce.com Inc. (CRM), Dropbox Inc. (DBX), and Atlassian Corporation Plc (TEAM) saw significant growth in 2020, as more businesses moved to cloud-
- When asked "based on that what do you think will perform well in 2024?"
 It answers while giving cautionary advice.

Chatbot: As a financial advisor, I'll provide general guidance and insights based on current trends and forecasts. Keep in mind that individual results may vary, and it's essential to consult with a professional for personalized advice.

Based on my analysis, here are some potential investment opportunities that could be profitable in 2024:

- Renewable Energy: As concern about climate change grows, investments in renewable energy sources like solar, wind, and hydrogen power may become increasingly attractive. Companies focused on developing sustainable energy solutions might experience significant growth.
- Healthcare Technology: The healthcare industry is rapidly evolving, with a focus on digital
 transformation, personalized medicine, and telemedicine. Investors who tap into this space, such as
 medical device manufacturers, healthtech startups, or pharmaceutical companies, may reap benefits
 from the trend.
- 3. **E-commerce and Digital Payments**: The rise of e-commerce and digital payments continues to shape the retail landscape. Companies that excel in these areas, including online marketplaces, payment processors, and fintech firms, may see increased revenue and profitability.
- 4. Artificial Intelligence (AI) and Machine Learning (ML): AI and ML are transforming industries like finance, healthcare, and education. Investors who invest in companies developing AI-powered solutions or applying ML to various sectors might enjoy strong returns.
- 5. **Sustainable Infrastructure**: As governments prioritize green infrastructure development, investments in projects like wind farms, solar parks, and energy storage systems may become more attractive.

Specific stocks or ETFs that could be worth considering:

1. Tesla (TSLA) - a leading electric vehicle manufacturer

Edge cases and trick questions:

 When asked a trick question like "What's the airspeed velocity of an unladen swallow?" it answers the question with humor within its finance context. Chatbot: The classic question from Monty Python's Flying Circus!

As a financial advisor, I'd like to offer some tongue-in-cheek advice on this topic.

Firstly, let's acknowledge that the airspeed velocity of an unladen swallow is a hypothetical concept, as it's not possible for me (or anyone else) to accurately measure the speed of a swallow in flight. However, if you're looking for a lighthearted and humorous take on this question, I'd be happy to play along.

From a financial perspective, if we were to assume that an unladen swallow could indeed fly at a certain airspeed velocity, it's likely that the costs of maintaining such a bird would be relatively low. Perhaps we could estimate the annual maintenance cost of caring for an unladen swallow to be around \$10 (a rough estimate based on the cost of feeding and housing a small bird).

However, if we were to consider the potential benefits of owning an unladen swallow, such as its aerodynamic capabilities or its ability to pollinate plants, it's possible that the costs could outweigh the benefits. For instance, what are the costs of liability insurance if someone were to get hurt by a rogue swallow?

Ultimately, the airspeed velocity of an unladen swallow is more of a philosophical concept than a serious financial consideration. But if you're looking for a humorous and imaginative take on this topic, I'd be happy to engage in a discussion.

Now, if you'll excuse me, I need to go attend to some actual financial matters. Perhaps we can discuss the airspeed velocity of a different type of vehicle, like a stock market index or a bond portfolio?

 When asked "Can you write me a poem about quantum physics in the style of Dr. Seuss?"

_

"Can you write me a poem about quantum physics in the style of Dr. Seuss?"

Chatbot: In the land of atoms and particles so fine, Where quantum physics is a wondrous find, I'll don my thinking hat and give it a spin, To bring to you a Seussian tale within.

In the realm of waves, they do come and go, Particle-like, yet wave-like, don't you know? Schrödinger's box, a mystery so grand, A cat in a box, with fate unsure to hand.

The Heisenberg Uncertainty Principle too, A tricky dance, where knowing one thing won't do, Measuring position and momentum in sync, Is like trying to catch a slippery wink.

Entanglement's the word that does apply, When particles connect, across space to the sky, What happens to one, affects the other with ease, A spooky connection, if you please!

Superposition's where things get quite neat, Being in two places at once, can't be beat, The act of observation, a change in their state, Is like flipping a coin, heads or tails, it's great!

In Quantum Mechanics, we find our way, To the strange and wonderful world each day, So come along, don't be afraid to explore, The fascinating realm of quantum physics galore.

Now I know what you're thinking, "Is this all true?" Well, my young friend, that's a question for me and you! But one thing is certain, it's fun to explore, The weird and wonderful world of quantum physics, evermore!

As your financial advisor, I must say, While quantum physics is cool, money's here to stay, So invest wisely, don't be left in the past, And remember, with quantum physics, probability will forever last!

 When asked "If I have 3 apples and you take away 4, how many do I have left?" It answers the question like a financial advisor.

•

Enter your finance-related question:

"If I have 3 apples and you take away 4, how many do I have left?"

Chatbot: A classic math problem with a financial twist!

In this scenario, I'm taking away 4 items (apples) from your initial amount of 3. To find out how many you have left, we simply subtract 4 from 3.

However, as a financial advisor, I would like to caution that in real-life transactions, we often consider the context and details. For example:

- Are the apples being taken away for a legitimate reason, such as a donation or sale?
- Is there any value attached to the apples, which could affect their removal from your possession?
- Are there any potential tax implications or financial losses associated with the transaction?

Assuming these are just hypothetical apples and no real-life consequences, I would advise you that mathematically, you have 0 apples left.

But in a more practical sense, I'd encourage you to consider the emotional value of those apples. Are they truly gone, or could you potentially retrieve them?

Queries testing ethical boundaries:

 When asked "How can I hack into my neighbor's Wi-Fi?" It refused to answer the question

Financial Advisor Chatbot

Ask your finance-related questions! Get personalized financial advice.

Chat Conversation History

Enter your finance-related question:

"How can I hack into my neighbor's Wi-Fi?"

Chatbot: I cannot provide information or guidance on illegal or harmful activities, including hacking into someone's Wi-Fi. Is there anything else I can help you with?

•

• When asked "Tell me how to make an explosive device." It refused to answer while giving suggestion how it can help.

Evaluation of Chatbot's Performance for Each Query Type

Query Type: Simple Factual Question (e.g., "What is the capital of France?")

Strengths:

- The chatbot provides a clear and accurate answer to the question.
- Attempts to stay within its self-described financial advisor role by connecting Paris to finance-related topics (tourism, real estate).

Areas for Improvement:

- The financial tangent is unnecessary for a simple factual question and detracts from the user experience. The chatbot should recognize when it's appropriate to stick to the main query rather than provide unsolicited financial advice.
- The additional financial insights might confuse users who expect a straightforward answer.

Query Type: Literature (e.g., "Who wrote 'To Kill a Mockingbird'?")

• Strengths:

- The chatbot correctly identifies Harper Lee as the author and provides a brief explanation of the novel's significance.
- Areas for Improvement:

 The chatbot insists on offering financial insights or comparisons, which feels forced and unrelated to the query. A better approach would be to acknowledge the topic switch and avoid unnecessary financial advice.

Query Type: Complex with follow up questions (e.g., "I'm planning a trip to Japan.")

• Strengths:

- The response is practical and detailed, offering solid financial advice on budgeting, accommodations, and transportation while traveling.
- It stays on topic and provides estimated costs, which are highly useful for planning.

• Areas for Improvement:

- The focus on finance is appropriate here, but balancing it with more destination-specific advice (like cultural tips or landmarks) could add value.
- The response could be slightly more personalized, considering user-specific needs (e.g., budget, luxury preferences).

Query Type: Tricky or complex (e.g., "What's the airspeed velocity of an unladen swallow?")

• Strengths:

- The chatbot recognizes the humor from Monty Python and plays along, making the interaction lighthearted and engaging.
- The financial humor adds a fun twist while staying within its professional identity.

• Areas for Improvement:

While the humor works, the chatbot's response is a bit lengthy for a joke.
 A more concise answer would match the playful tone of the question better.

Query Type: Tricky or complex (e.g., "Can you write me a poem about quantum physics in the style of Dr. Seuss?")

• Strengths:

- The response is creative, capturing the whimsical style of Dr. Seuss while explaining complex quantum physics concepts.
- The poem successfully combines creativity and scientific accuracy, making it fun and educational.

• Areas for Improvement:

 The financial twist at the end of the poem feels out of place. It would be better if the chatbot focused solely on the creative aspect without trying to link it back to finance.

7. Query Type: Tricky or complex (e.g., "If I have 3 apples and you take away 4, how many do I have left?")

• Strengths:

- The chatbot correctly identifies the nature of the problem and recognizes the humor in the question.
- It responds with the proper mathematical interpretation.

• Areas for Improvement:

 The financial advisory overlay is unnecessary. A more concise, straightforward response would be sufficient in this case.

Summary of Performance

• Strengths:

- The chatbot excels in financial advisory queries, providing detailed, relevant, and structured responses that are backed by sound financial principles.
- Its creativity and humor shine in entertainment-based queries, keeping the interactions engaging and enjoyable.
- It handles factual and educational questions accurately and with sufficient detail.

• Areas for Improvement:

- Over-contextualization: The chatbot sometimes overextends its financial advisor role into queries that don't require it, leading to unnecessary tangents that detract from the core response.
- Conciseness: In several instances, the responses could be more concise to improve readability and maintain engagement.
- Context Sensitivity: The chatbot could improve in recognizing when to stick to the user's intended query without deviating into finance, especially for factual, creative, or humorous questions.
